

Rohadur...

When your lab's supply dries up,

Ours won't!

With the world's Rohadur supply quickly drying up, it's good to know that Langer, the world's largest custom orthotic laboratory, has the world's largest supply.

Rohadur has been the most widely used material for biomechanical foot orthoses that are prescribed for maximum control. For its ability to resist torque forces, cracking and splintering, there is no substitute.

And no reason for you to accept one. So when your lab tells you, "No more Rohadur," maybe it's time "your lab" was Langer. For Rohadur, for the finest quality prescription orthotics in the world, and for a whole lot more...

Because, just as Rohadur has set the standard for orthotic materials, so has Langer set the standard for orthotic labs. For the past twenty years, we have been committed to supplying the podiatric profession with the highest quality materials and innovative precision-made biomechanical orthotics. And we'll continue to do just that, for a long time to come. Because if there's one thing there's never been a shortage of at Langer, it's commitment.
